SYMBOLS

The following standard symbols are used in this publication:

...	figures not available
...	figures not appropriate or not applicable
-	nil or zero
--	amount too small to be expressed
x	confidential
f	forecast
p	preliminary
r	revised
C	Census of Canada
M	thousand(s)
MM	million(s)
MW.h	megawatt hours
GW.h	gigawatt hours

Note: Components may not add to total due to rounding.

PREFACE

The Alberta Statistical Review, Quarterly is comprised of statistical tables, supplemented by graphs, containing monthly, quarterly and annual data covering the economy and peoples of Alberta. A brief narrative highlights section is also included. The publication is organized into the following twelve sections: Summary of Major Indicators, People, Labour Force, Income, Price Indexes, Economic Indicators, Energy and Natural Resources, Manufacturing, Construction, Agriculture, Trade, and Travel. The majority of the tables present data at the provincial level while others present data for communities or compare the economy of Alberta with that of Canada and other Provinces. Data from alternate sources are presented, where appropriate, to supply users with the most timely and detailed information available, and to facilitate interprovincial comparisons.

To ensure the accurate interpretation of the statistics in this publication, users should refer to the list of symbols and the glossary of terms.

To obtain additional information regarding this publication, the data within, or statistical updates, users are invited to contact the Information Services Section, Alberta Bureau of Statistics, (403) 427-3058.

HIGHLIGHTS

- As a result of a net loss through interprovincial migration, Alberta recorded a population decline for the fourth consecutive quarter. During the second quarter of 1984, Alberta lost 10,100 persons compared to a net loss of 9,300 during the previous quarter. The main recipients of interprovincial migrants from Alberta were Ontario, British Columbia and Saskatchewan. As of 1-Jul-84, the population of Alberta was estimated at 2,361,300, down 0.3 percent since 1-Jul-83.
- In 1983, Alberta's personal income totalled \$34,490 million, up 4.5 percent over 1982. This compares to annual increases of 12.2 percent and 23.7 percent recorded in the two previous years, respectively. Canada's personal income rose 6.2 percent in 1983. Although Alberta's per capita personal income was the highest in Canada in both 1981 and 1982, Ontario ranked first in 1983 at \$14,784. Alberta ranked second highest at \$14,652 and the national figure stood at \$13,541.
- Preliminary 1983 estimates indicate that Alberta's real Gross Domestic Product (discounting the effects of inflation) totalled \$13,331 million, a 2.5 percent decrease. However, this represents a relative improvement over the 5.2 percent decline recorded in 1982. This improvement was largely attributed to a shift in external trade which saw an increase in Alberta's exports and a decline in imports.
- The value of retail goods sold in Alberta during the first eight months of 1984 totalled \$7,375 million, up 2.6 percent over the same period in 1983. Most of the gain was concentrated in sales of durable goods, particularly from garages (20.4 percent), motor vehicle dealerships (10.7 percent) and household furniture stores (10.4 percent). Expenditures were down in household appliance stores (27.6 percent) and family shoe stores (14.7 percent), while the level of department store sales remained virtually unchanged. Retail sales for Aug-84 indicate that Alberta obtained the highest per capita retail sales among the provinces at \$413. Following was the Yukon/N.W.T. at \$412 and Ontario at \$407, while the national figure was \$389.

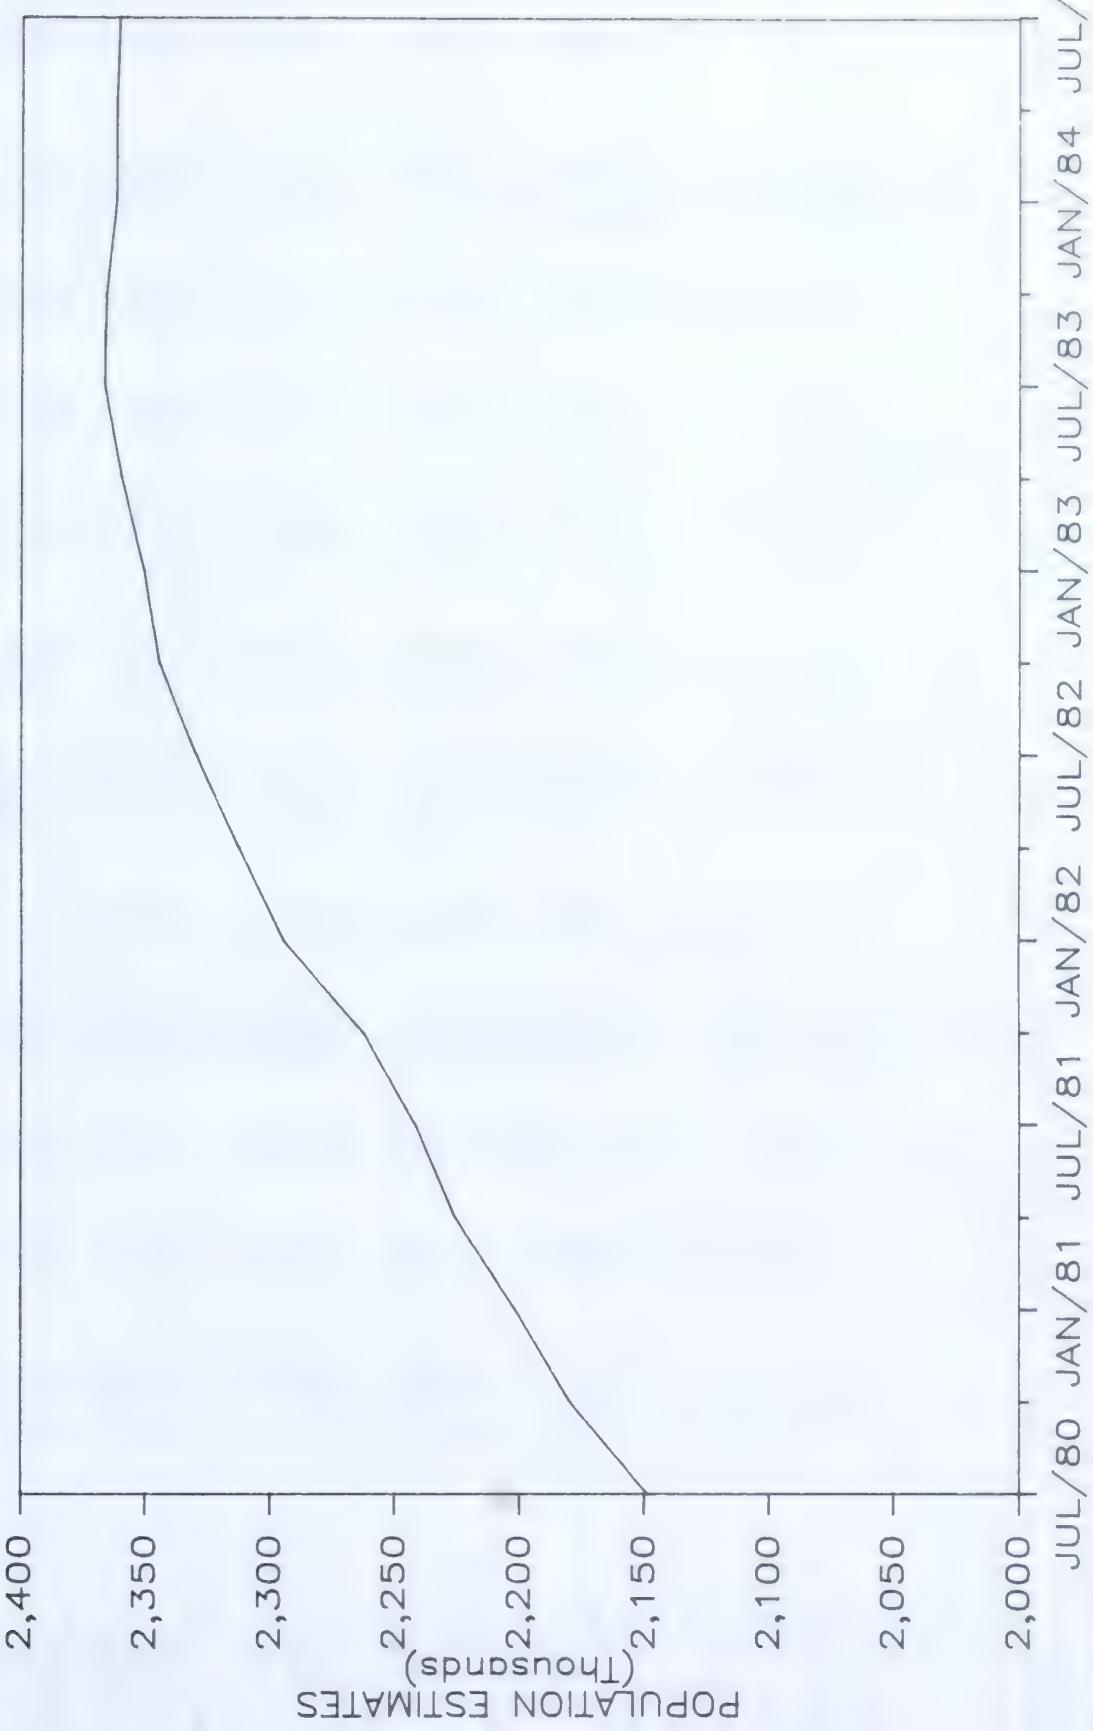

-The Consumer Price Index for Edmonton during Sep-84 rose 2.8 percent over Sep-83, while Calgary's index advanced 3.3 percent. Edmonton and Saskatoon registered the lowest year-over-year increases among the fifteen cities for which CPI's are produced. The increases for Calgary and Montreal were the fourth lowest. Higher prices for food, cigarettes and liquor as well as increased university tuition fees were among the factors responsible for the latest monthly increases for Edmonton and Calgary. Partially offsetting these advances were lower shelter charges, air fares and gasoline prices.

-In Sep-84, Alberta's employed labour force (unadjusted) dropped to 1,120,000, a decrease of 29,000 from Aug-84 and 3,000 from Sep-83. Employment losses in Alberta industries were most evident in construction (16.5 percent), manufacturing (7.7 percent) and transportation and utilities (7.1 percent). Employment was up 22.2 percent in the other primary industries (includes forestry, mineral fuels and services to mining), while the service industry, which accounts for over one third of working Albertans, grew by 3.7 percent. During Sep-84, unemployment rates (unadjusted) rose across Canada. Alberta's rate of 11.2 percent was the fourth lowest amongst the provinces. The national rate was 10.9 percent.

-Alberta manufacturing activity continued to remain above 1983 levels as cumulative shipments for the period Jan-Aug-84 were \$9,033 million, an increase of 8.0 percent over the same period a year ago. The most notable gains occurred in the paper and allied products industries (19.1 percent) and chemical and chemical products industries (14.7 percent). The petroleum and coal products industries, which account for over 30.0 percent of total shipments in Alberta, rose 10.7 percent. Weakness in the demand for manufacturing products was evident in the non-metallic mineral industries (down 10.8 percent) and metal fabricating industries (down 8.8 percent).

SOURCE: ENERGY RESOURCES CONSERVATION BOARD, ALBERTA

(1) NET PRODUCTION

(2) INCLUDES EXPERIMENTAL CRUDE OIL

(3) NET GENERATION, EXCLUDING INDUSTRIAL ON-SITE GENERATION

* INCLUDES SYNTHETIC CRUDE OIL, CONDENSATE, AND PENTANES PLUS

NOTE: SOME FIGURES MAY NOT ADD DUE TO REVISIONS AND TO THE ROUNDING PROCESS

** DETAILED INFORMATION ALSO AVAILABLE IN ASIST MATRIX NUMBERS 6227, 6228, 6229 ••

GLOSSARY

GLOSSARY

ASIST

ASIST (Alberta Statistical Information System) is a publicly accessible on-line information system for the retrieval, manipulation and dissemination of socio-economic data. ASIST has been developed in response to an ever-increasing need for a single source of timely and reliable information, which is readily accessible to businesses, government departments and agencies and the general public.

ASIST contains current and historical statistical information on a wide range of subjects including population, energy, trade and commerce, prices, manufacturing, finance and construction. In general, this statistical information focuses on Alberta and its various geographical areas. The Alberta Bureau of Statistics is solely responsible for co-ordinating the entry, maintenance and updating of all data within ASIST. Where applicable, ASIST matrix numbers have been provided at the bottom of tables. As well, many of the other statistical series presented in this publication are available on the Cansim Mini-base and can be retrieved through ASIST.

AVERAGE WEEKLY EARNINGS

Average weekly earnings represent gross pay before deductions for taxes, unemployment insurance contributions, etc. This includes salaries, straight-time wages, piece-work and regular commission earnings, regular paid incentive, cost of living and other bonuses, payments to persons absent with pay in the survey reference week, and overtime earnings (all pay received for the number of hours worked in excess of the standard workday or workweek). The payroll concept does not include supplementary labour costs.

Effective Apr-83, amendments were made to the survey used in collecting this data. Major alterations include:

- 1) The inclusion of firms of all sizes rather than only those with 20 or more employees.
- 2) The expansion of industrial coverage. The survey previously covered all industries except agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, and public administration and defence. Survey coverage has been augmented to include education, health and welfare services, and public administration.

Due to these changes in survey methodology, data from the new survey are not comparable with those previously garnered. To ease the transition period, Statistics Canada is continuing to publish a compatible series of monthly Industrial Composite data for Canada and each of the provinces. This is a synthetic series, using the new survey data to approximate the old survey Composite.

Please be warned, because of the many changes that comprised the survey's revisions in Apr-83, it is not possible for Statistics Canada to exactly reproduce the old Industrial Composite. This information is presented in Table 18 of this publication. All other earnings data within this publication (Tables 19 through 24) are from the new Employment, Payrolls and Hours survey.

BANK RATE

The Bank Rate is the minimum rate at which the Bank of Canada makes short-term advances to the chartered banks or to savings banks governed by the Quebec Savings Bank Act, and after 1-Dec-80 to all members of the Canadian Payments Association. Data shown is for the last Wednesday in the reference month.

BUILDING PERMITS

Residential Building Permits - Number

Number of dwelling units created:

1) Single

Refers to structures containing only one dwelling unit completely separated from any other dwelling or structure.

2) Cottages

Refers to seasonal dwellings such as summer homes and house-boats.

3) Double

Refers to dwellings found in structures containing two dwelling units such as duplexes and semi-detached dwellings.

4) Row

Refers to one-family dwellings in a structure of three or more attached dwellings.

5) Apartments

Refers to all multiple housing with three or more units such as triplexes, quadruplexes, row duplexes as well as apartments proper. Flats which are part of a non-residential structure are also included.

6) Conversions

Refers to dwelling units added by conversion of existing structures

Residential Building Permits - Value

Value of building permits issued for residential construction including residential garages, swimming pools, alterations and improvements.

Non-Residential Building Permits

Value of building permits issued for new construction, alterations and improvements for industrial, commercial, institutional and government construction.

1) Industrial Building Permits

Includes buildings used for: manufacturing and processing; transportation, communication and other utilities and agriculture, forestry, mine and mine mill buildings.

2) Commercial Building Permits

Includes stores, warehouses, garages, office buildings, theatres, hotels, funeral parlours, beauty salons and miscellaneous commercial signs, posters, heating and plumbing installations, etc

3) Institutional and Government Building Permits

Includes expenditures made by the community, public and government for buildings and structures - schools, universities, hospitals, clinics, churches, homes for the aged, blind, deaf and dumb, government office and administration buildings, law enforcement, etc.

CANSIM

CANSIM is the name given to Statistics Canada's computerized data base. It is often termed a general purpose data bank offering a detailed and conceptually compatible set of aggregate data pertaining to a large number of interrelated fields. CANSIM contains over 360,000 timeseries of socio-economic information. An example of a timeseries would be the annual population of Edmonton for a twenty-year period.

The Alberta Bureau of Statistics maintains approximately 6300 timeseries on CANSIM of Alberta specific data at both the provincial and sub-provincial level.

The majority of information contained in this publication is available on CANSIM. For your convenience we have provided CANSIM matrix numbers at the bottom of most tables.

CONSUMER PRICE INDEX

The Consumer Price Index(CPI) is a price index which measures the percentage change through time of a constant quantity and quality of goods and services purchased by a representative Canadian urban family in a specified time period. The CPI for each city measures price changes from one time period to another within that specific city. Thus, while city CPI's show the movement of prices in each city, they do not indicate price level differences between cities, or between cities and Canada. The CPI is not a measure of true inflationary-deflationary trends. The inference of using the CPI as a measure of true inflation or deflation is incorrect. The CPI only measures percentage changes of a "basket" of commodities - not all items which contribute to inflation or deflation are included.

CONVENTIONAL MORTGAGE RATE

The conventional mortgage rate is a simple average of rates as at mid-month charged by a number of large institutional lenders for residential mortgage loans.

DEPLANED

Traffic (passengers, mail and cargo) which lands and disembarks at an airport.

DWELLING COMPLETION

Dwelling completion is the stage at which all the proposed construction work on a dwelling unit has been performed.

DWELLING START

A dwelling start is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

DWELLING UNITS

Please note, the following definitions are applicable only to data from the Survey of Starts and Completions.

1) Single Detached

This is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

2) Semi-Detached

This category includes each one of two dwellings separated by a common wall extending from ground to roof, or by a garage.

3) Row

This comprises only single attached houses in a row of three or more dwellings. Row-duplexes are not included in this category.

4) Apartment and Other

This category includes dwelling units such as:

- duplexes
- double duplexes
- triplexes
- row-duplexes
- apartments as commonly known
- dwellings over, or at the back of, a store or other non-residential structure.

EMPLOYED

The employed labour force includes all persons who during the reference week:

- 1) did any work at all

- 2) had a job but were not at work due to:

- own illness or disability
- personal or family responsibilities
- bad weather
- labour dispute
- vacation
- other reason not specified above.

ENPLANED

Traffic (passengers, mail and cargo) which embarks and takes off from an airport.

FARM CASH RECEIPTS

Farm cash receipts include the cash returns from the sale of all agricultural products except those associated with direct inter-farm intraprovincial transfers. Other components included are Wheat Board payments, cash advances on farm-stored crops, deferred grain receipts in Western Canada, Agriculture Stabilization Act deficiency payments, Western Grain Stabilization Act payments, and provincial income stabilization payments.

GROSS DOMESTIC PRODUCT AT FACTOR COST

Gross Domestic Product (GDP) at Factor Cost is a measure of income accruing to the factors of production (land, labour and capital). It does not include income that accrues to the non-factor or invisible components of GDP (see Gross Domestic Product at Market Prices). Thus GDP at Factor Cost is derived from GDP at Market Prices by subtracting Indirect Taxes less Subsidies, plus Residual.

GROSS DOMESTIC PRODUCT AT MARKET PRICES

Gross Domestic Product (GDP) at Market Prices refers to the total value of production within a given geographical area for a specific time period, and is measured in prices which prevail during the period being valued. Total production measures are based upon the earnings of the factors of production (Factor Cost) plus the non-factor costs of production (Indirect Taxes less Subsidies). GDP at Market Prices also includes an indirect measure of depreciation called Capital Consumption Allowances. Since this is a measure of production, it does not include transfer payments.

GROSS DOMESTIC PRODUCT IN CONSTANT DOLLARS

Gross Domestic Product (GDP) in Constant Dollars is a measure of total production during a given time frame and a given geographical location which is valued in prices for some base year. For Alberta, the base year used is 1971.

LABOUR FORCE

The labour force is composed of that portion of the civilian non-institutional population fifteen years of age and over who, during the reference week were employed or unemployed.

LABOUR INCOME

Labour income, comprising wages and salaries and supplementary labour income, is defined as all compensation paid to employees residing in Canada. Supplementary labour income, which is defined as payments made by employers for the future benefit of their employees, comprises employers' contributions to employee welfare and pension funds, workmen's compensation funds and unemployment insurance.

MIGRATION

Migration is defined as a permanent change of residence from one geographical unit to another.

NET MIGRATION

Net migration is the difference between in-migration and out-migration for a geographical unit.

NEW HOUSING PRICE INDEX

The new housing price index measures changes in selling prices of new houses constructed by large and medium volume builders in metropolitan areas. The houses sampled are representative of the total being sold at that time but adjustments are made for changes in physical characteristics to arrive at pure price change. Prices used are the selling prices agreed upon between builder and buyer at the time of signing the contract. Prices relate to mid-month. The composite index includes the house and the serviced lot on which it stands.

NEWLY COMPLETED UNOCCUPIED DWELLINGS

Newly completed unoccupied dwellings are those which are not sold nor rented at the time the dwellings are reported as completed in the Survey of Starts and Completions. The units are surveyed every month until they are sold or rented.

NOT IN THE LABOUR FORCE

Persons Not in the Labour Force are that portion of the civilian non-institutional population fifteen years of age and over who, during the reference week were neither employed nor unemployed.

PARTICIPATION RATE

The participation rate represents the labour force as a percentage of the population fifteen years of age and over. The participation rate for a particular group (age, sex, marital status, etc.) is the employment in that group expressed as a percentage of the population for that group.

PERSONAL DISPOSABLE INCOME

Personal Disposable Income consists of total personal income less personal direct taxes and other current transfers to government from persons.

PERSONAL INCOME

Personal Income includes all forms of income received by persons and unincorporated businesses:

- 1)wages, salaries and supplementary labour income
- 2)military pay and allowances

PERSONAL INCOME (CONTINUED)

- 3)net income of non-farm business including rent
- 4)net income of farm operators from farm production
- 5)interest, dividends and miscellaneous investment income
- 6)transfer payment income from the government, from corporations and from non-residents.

PLACE-TO-PLACE PRICE INDEXES

A Place-to-Place Price Index, or Spatial Price Index, should not be confused with the Consumer Price Index (CPI). Place-to-Place Price Indexes indicate price differences of a standard basket of goods and services between a community and a base location utilizing a specified reference period. In this case it is June, 1983. The indexes of the base location are standardized to 100 to enable these comparisons.

PRIME RATE

The Chartered Banks' Rate on Prime Business Loans is the rate charged to the most credit-worthy borrowers. The rate shown is of the last Wednesday of the month. When there are differences in the rate charged by individual banks, the most typical rate or rates are taken.

PRIVATE AND PUBLIC INVESTMENT

Private and Public Investment consists of total outlays for construction and for the acquisition of producers' machinery and equipment by Canadian business, institutions and governments, together with expenditures for housing. Capital expenditures include the cost of procuring, constructing and installing new durable plant and machinery, whether for replacement of worn or obsolete assets, or as net additions to existing assets. Repair expenditures represent the non-capitalized outlays made to maintain the operating efficiency of the existing stock of durable physical assets.

RETAIL TRADE

Retail trade is defined as the aggregate sales made through retail locations(outlets). Retail trade estimates do not include any form of direct selling which bypasses the retail store, for example: direct door to door selling; sales made through automatic vending machines; sales of newspapers or magazines sold directly by printers or publishers; and sales made by book and record clubs. Retail trade excludes: retail sales through ancillary units, for example, warehouses, head offices, etc.; sales of contractors whose major activity is not retailing; and retail transactions between individuals.

SEASONAL ADJUSTMENT

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally-adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, crop cycles, holidays and vacation periods, grain receipts in Western Canada, deficiency payments made by provincial governments and the agricultural stabilization board, and provincial income stabilization payments.

TAXATION STATISTICS

Taxation Statistics are based on individuals that have filed tax returns with Revenue Canada, Taxation. Allocation of income is on the basis of the taxfiler's address at the time of filing. These figures should not be used to arrive at a per capita personal income figure for the province or sub-provincial areas for the following reasons:

- 1) Some individuals (e.g. students) who have earned small amounts of income during a year may not file a return with Revenue Canada, Taxation.
- 2) Some taxfilers may not report all income received, i.e., underestimate their income.
- 3) Imputed income is not included in taxation statistics, e.g. free room and board, clothing, etc. provided to employees.

UNEMPLOYED

The unemployed includes those persons who during the reference week:

- 1) were without work, had actively looked for work in the past four weeks (ending with reference week) and were available for work.
- 2) had not actively looked for work in the past four weeks but had been on layoff for twenty-six weeks or less and were available for work.
- 3) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from reference week, and were available for work.

UNEMPLOYMENT RATE

The unemployment rate represents the number of unemployed persons as a percent of the labour force. The unemployment rate for a particular group (age, sex, marital status, etc.) is the unemployment in that group expressed as a percent of the labour force for that group.

VALUE OF CONSTRUCTION WORK PURCHASED

The Value of Construction Work Purchased consists of the total value of output of both the construction industry and construction labour forces in other industries. Also included are related construction costs which are accumulated during the creation of a structure. Examples include pre-construction planning and design, management, legal and real estate fees, interest during construction, etc.

VALUE OF MANUFACTURING SHIPMENTS

Value of manufacturing shipments is defined as the gross value of goods produced from its own materials by the reporting establishment, or for its account. Value is net of discounts, returns and allowances, sales tax, excise taxes and duties, returnable containers and common or contract carriers' charges for outward transportation (but not of own carriers' delivery expense). Shipment values in this publication are monthly projections of annual census of manufacturers' values based on returns from a stratified systematic sample of manufacturing establishments.
